SKIL BUILDS QUALITY INTO EVERY TOOL MANUFACTURED

SUPER BURNOUT PROTECTED MOTORS

Only Skil gives every electric motor it builds this important double protection.

1. All motor windings, using high temperature burnout resistant wire, are coated with a polyester resin that bonds them in place and provides additional insulation against moisture and heat.
2. Armature coil wires are welded to the commutator (never soldered) so they can't melt. All armatures are balanced for smooth operation and prolonged bearing life.

As a result, Skil Super Burnout Protected motors are able to withstand hard use and frequent, excessive overloads.

SAFETY STOP BRUSHES—Skil's Safety Stop Brush System automatically stops the tool from running when brushes wear out.

HOUSINGS—All Skil housings are precision made for strength and light weight.

DOUBLE INSULATION—All double insulated tools listed in this catalog are equipped with 2 prong plugs that fit all standard receptacles and can be used where grounding is inconvenient. They are rugged in design, equally comfortable to hold and built to SKIL's recognized standard of durability.

Other quality features include heavy duty bearings and precision gears designed in accordance to the task each product must perform.

MOTORS

ALL SKIL ELECTRIC TOOLS SHOWN IN THIS CATALOG ARE FOR OPERATION ON 115V AC UNLESS OTHERWISE SPECIFIED.

Universal motors used are suitable for operation on DC or AC, 25—60 Hz (formerly cycles). Speed Control tools are to be used on Alternating Current (AC) at 50-60 Hz. only.

CORDS

Tools shown as Double Insulated have two conductor cords and two prong plugs. All other tools have three conductor cords and three prong grounding type plugs.

EXTENSION CORD SELECTION

In selecting an extension cord for your electric tool, be sure to use one of sufficient size to carry current drawn. An undersized extension cord will cause a drop in line voltage, resulting in power loss and overheating. Following table shows correct size cord, depending upon its length and tool nameplate ampere rating.

SKIL HELPS YOU "SELL" YOUR CUSTOMERS

by providing such useful extras as the PTI Safety Rules for Power Tool Users; a listing of Skil's Quality Features which give you added "sales ammunition"; and the Skil "HOW-TO-DO-IT" BOOKLET written especially for people who are hesitant to pick up and use a power tool.

With these sales aids, you'll find that "SKIL makes it easy" for you to promote and sell the SKIL line.

YELLOW PAGES FOR BUYER ACTION

Yellow Pages

Skil's Yellow Pages Program puts you where the action is when prospects are looking to buy. Skil provides trade mark listings under "Tools Electric" and "Saws" in all yellow pages directories serving a population of 50,000 or more. You pay only a few pennies for your listing under the caption "Dealer."

Surveys prove the yellow pages is your most profitable promotional buy. See your Skil representative or local yellow pages salesman for details.

SKIL DRILLS

PROVIDING YOU WITH THE LARGEST VARIETY NOW AVAILABLE TO POWER TOOL USERS. WITH THE SKIL LINE YOU HAVE A DRILL TO SUIT EVERYONE'S NEEDS.

SKIL CORPORATION HAS BEEN RESPONSIBLE FOR NUMEROUS INNOVATIONS IN PORTABLE POWER TOOLS WHICH HAVE PROVEN SO IMPORTANT THAT THE ENTIRE POWER TOOL INDUSTRY HAS FOLLOWED OUR LEAD. MUCH OF THIS INNOVATION HAS BEEN DIRECTED TOWARD A DRILL LINE WHICH OFFERS YOUR CUSTOMERS THE CAPABILITY OF HANDLING MANY MORE JOBS THAN EVER BEFORE POSSIBLE.

AVAILABLE IN 3 STYLES:

STANDARD DRILLS

TSC DRILLS

DRIVE-R-DRILLS

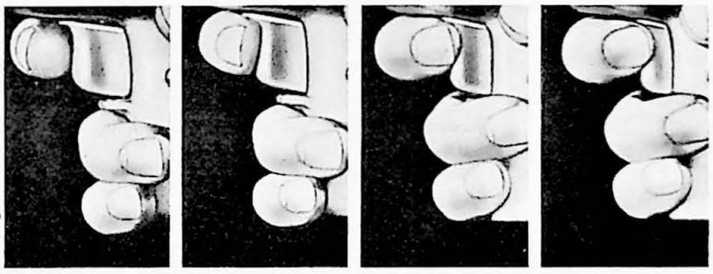
STANDARD DRILLS

Operate at a Single Forward speed at top RPM

Standard "On/Off" drills run at their maximum speed as soon as they are turned on. The Skil standard drill is the basic quality tool for the homeowner or do-it-yourselfer. Compact, lightweight, yet handles the tough jobs. Powerful Super Burnout Protected motor delivers the power and torque to handle most home projects. All have precision helical gears for extra long life. Available as Models 503, 560, 541 and 542 on Pages 8 and 9.

TRIGGER SPEED CONTROL DRILLS

Operate at any Forward speed from 0 to top RPM

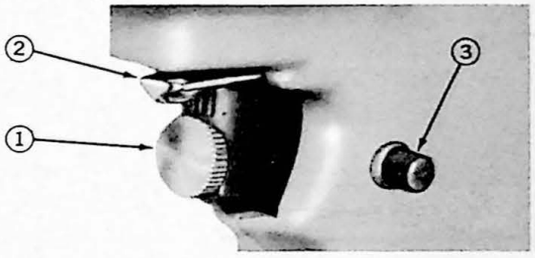


With Trigger Speed Control (TSC) the operator controls the speed of the drill from a dead stop to the maximum speed. He applies more pressure on the trigger to increase speed and releases pressure to decrease speed. He can start the bit in precisely the desired spot even on curved surfaces. With TSC there is no need to center punch a surface before drilling. The operator simply begins drilling at the desired spot at a very low speed. After a drill point impression is made in the surface, he increases the bit speed to complete the drilling operation. Drilling ceramic tile with masonry bits is made easy with this feature.

TSC also permits the operator to use his drill as a power screwdriver without the need of clumsy attachments. Driver bits fit directly into the chuck as simply as drill bits. There's even a socket adaptor for tightening nuts and bolts with interchangeable sockets. Available as Models 501 and 569 on Pages 8 and 9.

DRIVE-R-DRILLS

Operate Forward or Reverse from 0 to top RPM with ADJUSTABLE TRIGGER SPEED CONTROL



NOW 3 ADDITIONAL FEATURES, PIONEERED AND PATENTED BY SKIL, ARE AVAILABLE ON 5 DRILL MODELS

1. SKIL DESIGNED SPEED ADJUSTING KNOB

Starting with all the advantages of the remarkable TSC drill, we've added an adjusting knob (1) which enables the operator to pre-set any maximum speed.

Regardless of the pressure applied on the trigger, the drill will not rotate faster than the maximum pre-set speed. The operator can change the maximum speed simply by turning the adjusting knob to a higher or lower speed.

2. REVERSING FEATURE

Now a simple lever (2) can switch the drill into reverse. All the advantages of Adjustable TSC are present when this drill is running forward or reverse. The drill becomes a complete power screwdriver because it will remove screws and bolts as well as drive them. With the proper tap it can thread or re-thread screw holes in metal or plastic. This reversing feature enables your customers to use a drill for many applications which until now required additional power tools.

3. LOCKING BUTTON

The locking button (3) makes it possible to lock the drill in the "On" position at any speed. With the trigger in the locked position, the operator can still increase or decrease the pre-set speed by turning the adjusting knob.

SKIL Reversing Drive-R-Drills with Adjustable Trigger Speed Control are the ultimate in modern, versatile, dependable drills. They are available as Models 596, 597, 598, 456 and 457 on Pages 8 and 9.

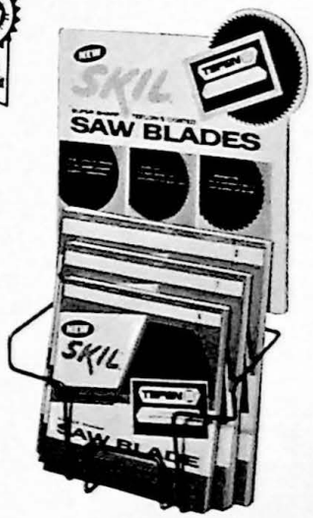
TEFLON-S* COATED SAW BLADE ASSORTMENT WITH FREE DISPLAY



The greatest advance in saw blades since SKIL introduced the very first portable circular saw blade 43 years ago. SKIL quality Teflon-S coated saw blades cut cleaner, faster and with far less friction for increased efficiency, less strain and longer motor life. Blades stay cleaner too, because sap doesn't stick. Teflon-S coated blades may be resharpened and reset without damaging this special coating.

Buy the basic SKIL Teflon-S Coated Blade Starter Kit and receive this bright, traffic-stopping wire rack display FREE.

NEW SKIL "DETECTRON" TAKES THE GUESSWORK OUT OF TOOL REPAIR

Each of Skil's 57 modern Factory Service Centers is equipped with our new "DETECTRON" Electronic Tool Tester to insure the ultimate in guaranteed power tool repair service. Every tool brought in for repairs is analyzed electronically before repair work begins. Any defects in the entire electrical system—armature, field, switch or cord—is diagnosed quickly. A highly trained Skil technician using the latest factory approved repair methods and genuine Skil parts will make all repairs promptly, efficiently and economically. After repairs are made, the tool is again analyzed on the "DETECTRON" to insure proper operating efficiency.

SKIL GUARANTEE

SKIL Electric Tools are designed to the highest standards of excellence. Precise modern manufacturing techniques together with the use of the best materials available result in products that are rugged, comfortable to hold and assure trouble free service. Every SKIL tool has been carefully inspected at various stages of its manufacture and is guaranteed against defects caused by faulty material or workmanship.

Our obligation assumed under this guarantee is limited to the replacement of parts, which by our examination are proven to be defective and which have not been misused, carelessly handled, or defaced by repairs made or attempted by others. The complete tool must be returned to the nearest SKIL Factory Service Center or to an authorized Service Station with transportation charges prepaid. No other guarantee of our products, written or verbal, is authorized by us.
